

A.I. Rusakov

# Course of Lectures on Strength of Materials

Recommended by Education Board  
of Rostov State University of Transport Communication  
as a textbook for teaching the students  
in “Transport Construction” branch of trade education

Rostov-on-Don

2004

UDC 539.38

Reviewers: Dr. of Engineering, Prof. Scherbak P.N. (Rostov State University of Transport Communication); Dr. of Engineering, Prof. Derushev V.V. (Rostov Military Institute of Rocket Forces); Dr. of Engineering, Prof. Tkachev V.A. (Shahty College of Platov South-Russian State Polytechnic University)

**Rusakov A.I.**

Course of Lectures on Strength of Materials: Textbook for IHL. – Rostov-on-Don, 2004.

The textbook has been written in accordance with State Educational Standard of 2000 for teaching the specialist in line of transport construction. The principal focus is on validity and simplicity of exposition.

ISBN 5-87259-276-0

# CONTENTS

Introduction . . . . .	4
Lecture 1. Stress . . . . .	5
Lecture 2. Strain and Hooke's Law . . . . .	16
Lecture 3. Generalized Hooke's Law and Mechanical Properties of Materials . . . . .	27
Lecture 4. The Solution Methodology for Statically Determinate and Indeterminate Problems . . . . .	37
Lecture 5. Properties of Plane Figures . . . . .	45
Lecture 6. Torsion . . . . .	53
Lecture 7. Internal Forces due to Bending . . . . .	60
Lecture 8. Stresses and Displacements in Lateral Bending . . . . .	71
Lecture 9. Applied Problems of Bending Analysis . . . . .	78
Lecture 10. Shear Stresses due to Bending . . . . .	85
Lecture 11. Continuous Beam . . . . .	95
Lecture 12. Beam on Elastic Foundation . . . . .	105
Lecture 13. Simplest Bar Systems and Work Method for Their Analysis . . . . .	115
Lecture 14. Highlights of Tensors . . . . .	123
Lecture 15. Transformation of Tensor Components due to Rotations of Coordinate System . . . . .	129
Lecture 16. Stress Tensor and Deformation Tensor . . . . .	136
Lecture 17. Tensor Use for Stress-Strain State Study . . . . .	146
Lecture 18. Theories of Failure . . . . .	153
Lecture 19. Mechanics of Failure . . . . .	162
Lecture 20. Resistance to Combined Stress and Compound Bending . . . . .	169
Lecture 21. Eccentric Tension-Compression . . . . .	177
Lecture 22. Combined Bending and Torsion of Shafts . . . . .	184
Lecture 23. Introduction to the Theory of Structural Stability . . . . .	189
Lecture 24. Bar Buckling Analysis . . . . .	196
Lecture 25. Transverse-Longitudinal Bending . . . . .	204
Lecture 26. Introduction to the Theory of Shells of Revolution . . . . .	212
Lecture 27. Internal Forces due to Bending of Shells . . . . .	222
Lecture 28. Methods of Elasticity Theory in Shell Analysis . . . . .	231
Lecture 29. Impact Action of Load . . . . .	239
Lecture 30. Strength in Case of Cyclic Variant Stresses . . . . .	249
Lecture 31. Endurance Factors upon Cyclic Stresses . . . . .	255
Lecture 32. Strength Analysis with Allowance for Plastic Yield . . . . .	264
Lecture 33. Fundamentals of Theories of Elasticity and Plasticity . . . . .	274
Lecture 34. Basics of Creep Theory . . . . .	283
Lecture 35. Optimal Design and Structures Reliability . . . . .	294
Supplement 1. Rolled Stock . . . . .	302
Supplement 2. Tables for Buckling Analysis . . . . .	317
Bibliography . . . . .	319
Subject Index . . . . .	321
